***Fig. XXfigure_support_analyses.** A summary of phylogenomic results from the previous studies and reanalysis conducted in this study. Each shape represents an phylogenetic analysis that has been analyzed by ML (designated by the circle) or BI inference (designated by the triangle). Analyses with a support of bootstrap values less than 90% or a posterior probability less than 0.95 are considered as unresolved. (A) A total of `r nrow(analyses_published_filter)` analyses were transcribed from the literature (related to Supplementary Table XX). (B) A total of `r nrow(analyses_new)` new phylogenomic analyses were conducted in this study (related to Supplementary Table XX).
